

## Laboratories Approved for the Analysis of *Cryptosporidium* Under the Safe Drinking Water Act

**As of May 2007, EPA estimates that sufficient laboratory capacity exists for the LT2. EPA has generally postponed evaluation of additional laboratories, including commercial, county, municipal and utility laboratories, until further notice. EPA will consider evaluation of State and EPA Regional laboratories on a case-by-case basis, resources permitting, based on the role that States and EPA Regions play in the certification and approval programs for laboratories.**

The following laboratories have passed the Laboratory Quality Assurance Evaluation Program for Analysis of *Cryptosporidium* under the Safe Drinking Water Act (Lab Quality Assurance Evaluation Program), and have been granted "Approved" status. The purpose of the Lab QA Program is to identify laboratories that can reliably measure the occurrence of *Cryptosporidium* in surface water using EPA Method 1622 and/or EPA Method 1623.

The following table is sorted in alphabetical order by lab name and includes commercial, government, public water system and university laboratories.
